

Gyro Swing 32/40

INTAMIN
AMUSEMENT RIDES

The Gyro Swing is a powerful, extraordinary experience that captures the attention of passengers and spectators alike. The ride combines a strong sense of anticipation with a feeling that the rider can actually “fly”. The seating arrangement increases the ride sensation significantly, as the passengers sit with their legs dangling freely in the air. The swinging pendulum motion, combined with a comfortable speed of rotation – and most important of all – the suspended seating arrangement, all produce a sensational feeling of flying. As they pass through the vertical position, the passengers experience the thrill of increased G-forces, but when they get to the top, they feel almost completely weightless.

Technical Data

Gyro Swing 32/40

| | |
|---------------------------------------|-----------------------------------|
| Height of the structure | up to 25 m (higher upon request) |
